Research

Specialist care improves prognosis of adults with congenital heart disease

A study published in the Journal of the American Heart Association that compared the outcomes of heart failure (HF) versus non-HF hospitalizations in adults with congenital heart disease found that patients in cardiology care within 30 days of hospital admission had a lower mortality risk.

Heart pump extends survival of patients with advanced heart disease

Studies show the Impella 5.5 temporary heart pump used as a bridge to transplant or heart recovery improves the prognosis for patients with end-stage heart failure.
